

GREAT WILDEBEEST MIGRATION – EAST AFRICA

The migration is rarely the same in terms of exact timing and direction. However, the typical route is:

JAN - MAR

The herds are usually calving on the short grassy plains in the southern Serengeti

APR - MAY

Movement towards the central Serengeti in splinter herds

JUN - JUL

Splinter herds congregate in the western corridor and start moving north

AUG - OCT

Start moving north into the Masai Mara crossing to and fro over the Mara river. To deplete the abundant grass before returning south

NOV - DEC

Herds break into splinter groups and head south for breeding season
